

LigaJect®

Real precision

Syringe for intra-ligament anaesthesia

- Comfortable
- Rapid
- Safe
- Effective

Effective

Owing to its design, the LigaJect® dosing lever requires 10 times less pressure and uses 10 times less anaesthetic than any other type of syringe.

Safety

With its carefully designed ergonomics, the LigaJect® dosing lever has a very natural action and ensures gradual, controlled diffusion of the anaesthetic.

No overdosing, so that the patient is numbed for a shorter period.

Practitioner comfort

The LigaJect® design optimises positioning the needle, injecting and dosing: pen-shaped with an angled tip and ergonomic dosing lever.

The flow of anaesthetic can be monitored through the window on the side.

Patient comfort

With the 45° angle, perforation is more precise and easier. Less painful, more rapid injection.
